SUBJECT:	Clarification # 2 RFQ No. 2017-0064/THORVALDSDOTTIR: <i>"High Pressure Inflatable Meeting Tent Set for Field Warehouse."</i>		

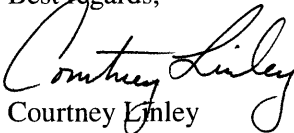

Dear All,

Please find enclosed the Commission's Clarification No. 2 in response to queries raised by potential bidders concerning Request for Quotation No. 2017-0064/THORVALDSDOTTIR: *"High Pressure Inflatable Meeting Tent Set for Field Warehouse"*.

Please note that no further requests for clarification concerning this solicitation will be accepted by the Commission.

We look forward to receiving your quotation.

Best regards,

Courtney Linley
Chief, Procurement Section

RFQ No. 2017-0064/THORVALDSDOTTIR
Questions & Answers

QUESTIONS	ANSWERS
<p>1) It is required that the tent have PVC Flooring with non-slip surface – 800g/m²?</p>	<p>The specifications of the tents have been outlined based on specifications of the ROFI RAPID 610 MKII unit (which has 800 g/m²) or equivalent. This specification is a key feature as it would be heavily used for loading/ packing and camp maintenance activities.</p> <p>However, the Commission would not exclude another product based only on minor deviations from the parameters indicated in the ToR – provided that the alternative proposed unit is fully equivalent and interoperable with the requested unit.</p>
<p>2) Does the Commission accept PVC-flooring with non-slip surface 760g/m²?</p>	<p>Please refer to the answer to question No. 1.</p>
<p>3) Is a form of Manufacturer's Authorization acceptable in this bid?</p>	<p>Please note that the offered unit shall be in full accordance with specifications detailed in the Terms of Reference.</p>
<p>4) Please provide measurements on the openings/doors on the existing softshell infrastructures that need to be fully compatible with the offered solution.</p>	<p>The offered units need to be fully compatible with the ROFI Amplifier and ROFI Rapid tent units as outlined in the Terms of Reference. This applies to the measurements of the openings as well as to the connector system which connects these units together. In general, ROFI Amplifier uses "Danish connector /NATO connector – or eyelet connector". The details of these connection systems as well as the technical data are not the Commission's property to share as they are developed and owned by each manufacturer respectively. Bidders are advised to contact ROFI for such details; www.rofi.com.</p>
