RFQ No. 2023-0084/THORVALDSDOTTIR

Proof of Concept Solution for Security Card Access to GIMO Platform Infrastructure During an OSI

Questions from Bidders	Answers from the Commission
<p><u>Question 1</u> Please advise if CTBTO will allow an alternative as a solution (technology that provides advanced authentication capabilities for securing access to your organization's critical assets. By leveraging innovative and adaptive risk analysis algorithms, this technology goes beyond traditional MFA methods and enables you to achieve a higher level of security while maintaining a seamless user experience) or the only solution that you are looking for is based on the cards.</p>	<p><u>Answer 1</u> The card solution is part of a solution that is being explored. The extension of the proposed physical security solution would be preferred, therefore, if a new solution that is being proposed, then it adds additional equipment and assets that personnel need to carry, which is not optimal. The technology being used is already specified in the Terms of Reference. Bidders should therefore adhere to the specifications indicated in the Terms of Reference.</p>
