## Annex C

### Terms of Reference (ToR) for XCP-ng and Xen Orchestra support

#### 1. Introduction

The Preparatory Commission for the Comprehensive Nuclear Test Ban Treaty Organization (CTBTO) is an international organization based in Vienna, Austria. Its main task is establishing a global verification regime to monitor compliance with the Comprehensive Nuclear Test Ban Treaty (CTBT), which bans all nuclear explosions. The verification regime includes a global network of over 337 monitoring facilities using four different technologies (seismic, hydro-acoustic, infrasound, and radionuclide), a communications infrastructure, an international data center, and the capability to conduct on-site inspections.

Additional information on the CTBTO may be found at <https://www.ctbto.org/>.

The Commission intends to establish a Contract for “XCP-ng and Xen Orchestra support” (hereinafter referred to as the “Service”). The Contractor shall work with the Commission and shall provide Services in accordance with these Terms of Reference (ToR).

This ToR defines the technical framework for all related activities to be performed during the delivery of Services. It contains all technical requirements for the activities that the Contractor shall conduct.

#### 2. Background

The Commission is replacing its current virtualization solution with the XCP-ng and Xen Orchestra solutions as it is no longer supported by the vendor.,. The current virtualization solution is used to run dedicated servers for network monitoring, documentation, etc. Current environment consists of 4 hosts.

The XCP-ng is an open-source virtualization platform based on the Xen hypervisor technology. XCP-ng is one of the most secure virtualization platforms on the market. The separation of platform components is at the heart of XCP-ng's architecture and the platform is patched on a regular basis to increase security and prevents loopholes. Only the *Dom0* is able to communicate directly with the hardware in XCP-ng, which greatly mitigates the risk of attacks through unprivileged VMs. Whether it is to improve the performance of the solution, to reinforce the security of the platform or to increase its interoperability, XCP-ng benefits from the constant work of a dozen specialized developers.

Xen Orchestra (XOA) is management interface for virtual infrastructure, Xen Orchestra is both a web and API-based, agentless appliance that includes all the needed features, from hot migration to continuous replication of virtual machines.

To efficiently operate the software the Commission needs to purchase support service VMS Enterprise which include full-featured XOA and updates for hypervisor with 24/7 availability and 1 hour response time.

XCP-ng and XOA are installed and maintained by the Commission on-premise.
